Question 3

https://www.fairfield.edu/admission-and-aid/tuition-and-costs/office-of-the-bursar/billing/index.html

      Inside **table.html**, you may find the HTML and ripped CSS from the table at the above URL. Although the CSS is not complete, this is likely due to libraries that the site uses not being able to be included (different code from frameworks, font awesome CDN packages, etc…)

It is important to see that the table does not have some accessibility features such as attributes which may be useful to screen readers… etc. **Inside optimized.html,** the **improved code** can be found with new attributes such as headers and different id declarations for the td elements. Additionally, captions have been added to help for table content to be easier to understand.

These improvements are made mainly for screen readers. Attributes such as aria-label are mainly intended for this and are part of an open standard which many sites should adapt for accessibility purposes.
